## Calculating Materials

1. Working out volume. For a rectangular or square garden, simply multiply the length by width by desired depth to give the amount in m<sup>3</sup>.

**For example:**

A garden is 5m long x 4m wide and the desired soil depth is 10cm (0.1m).

Therefore the amount of soil required is: 5m x 4m x 0.1m = 2m<sup>3</sup>.

**Note: Basic Volumes –**

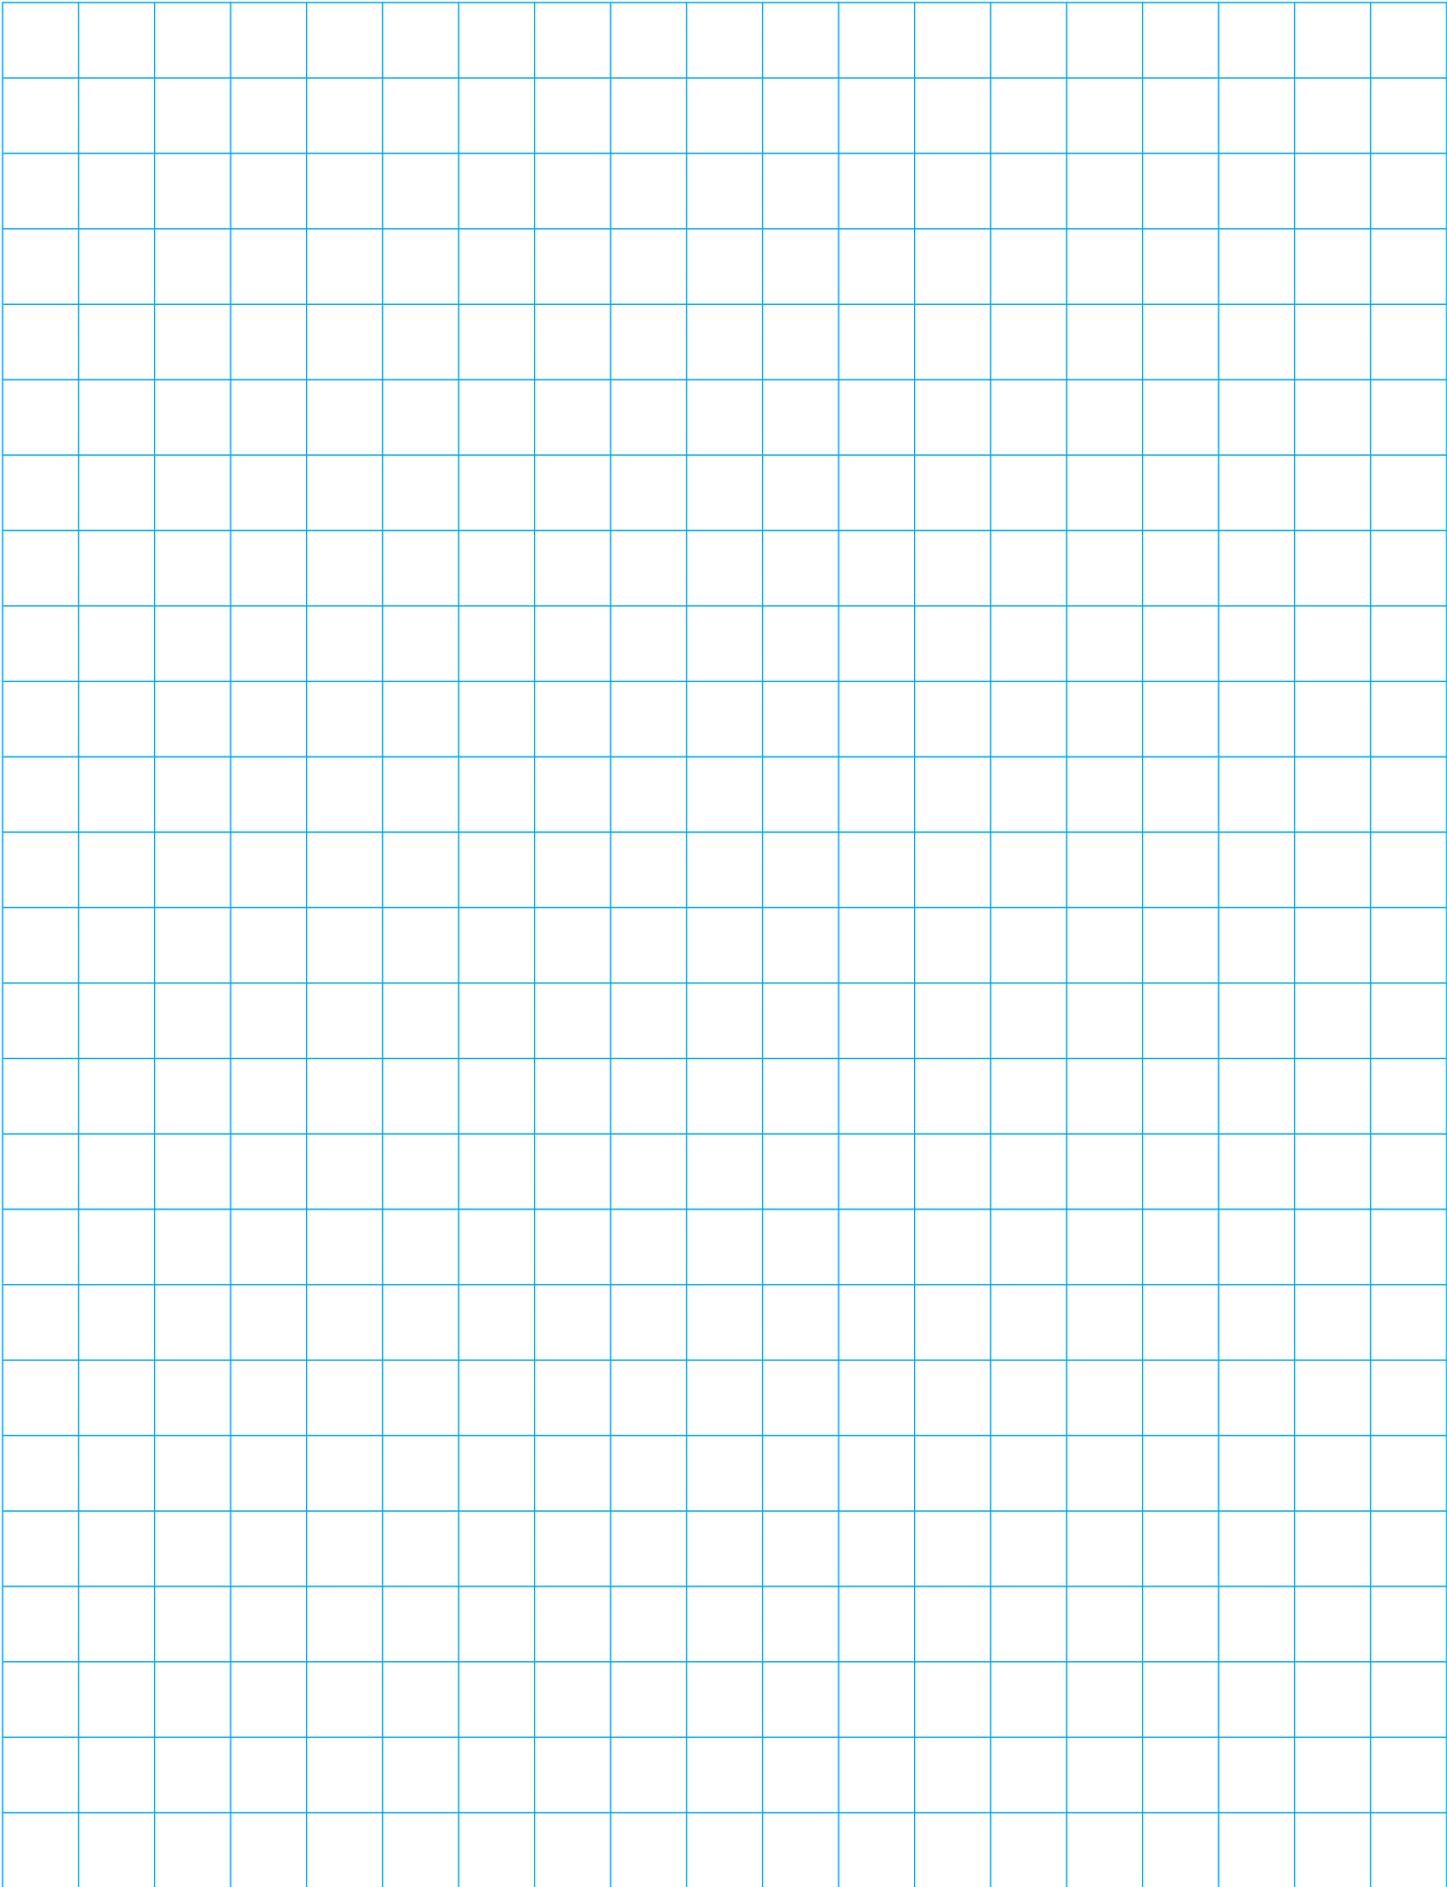

Most organic based mixes. Are sold by m<sup>3</sup>

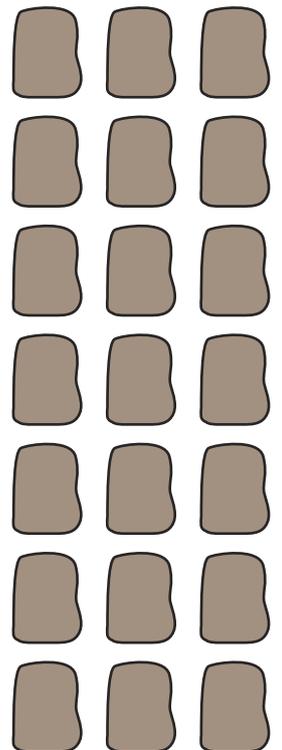

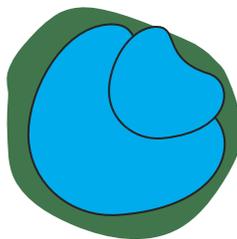

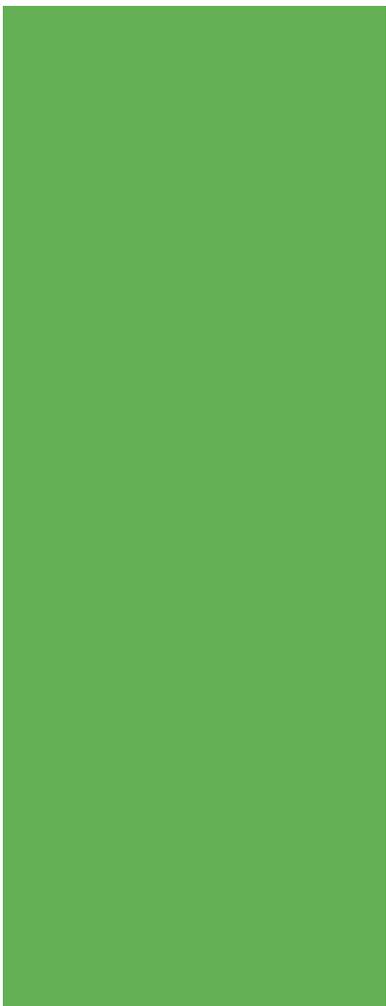

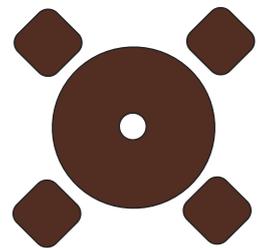

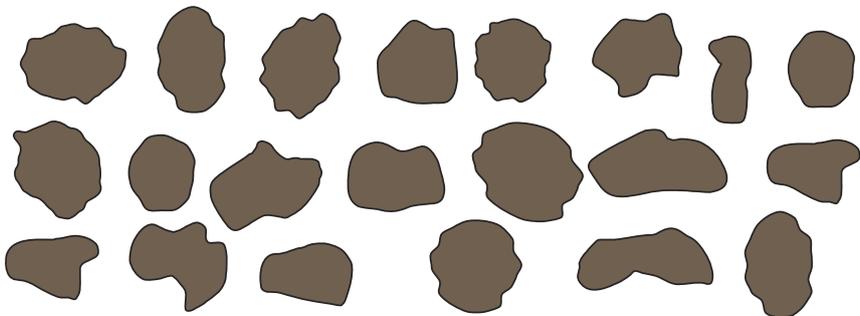

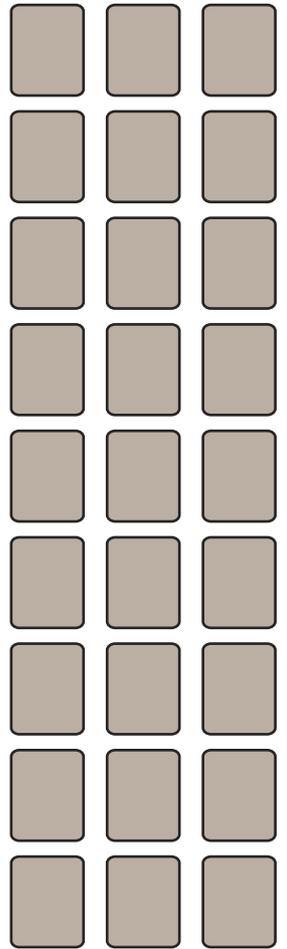

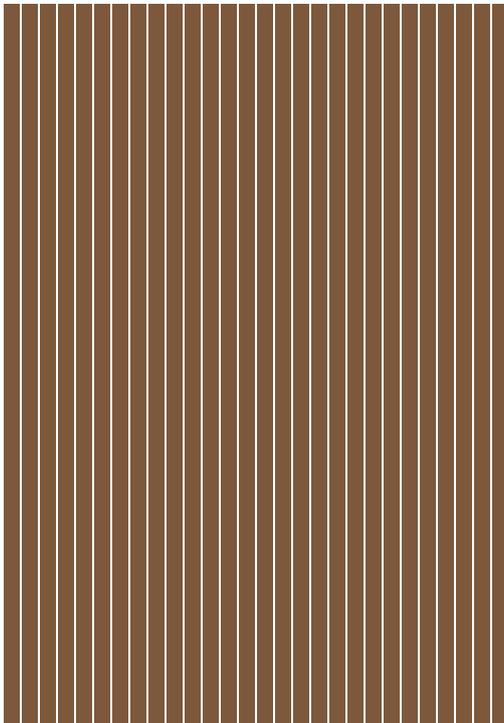

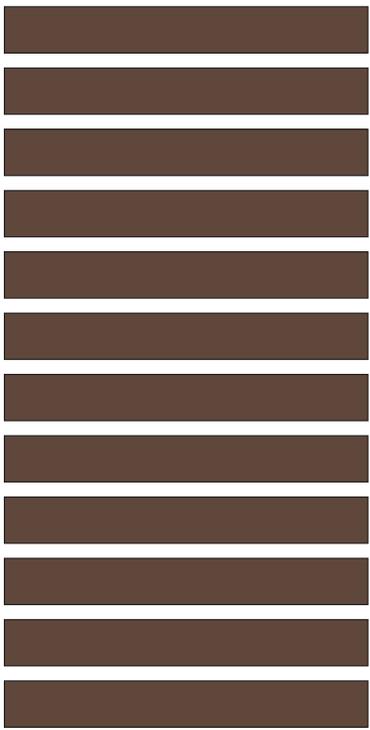

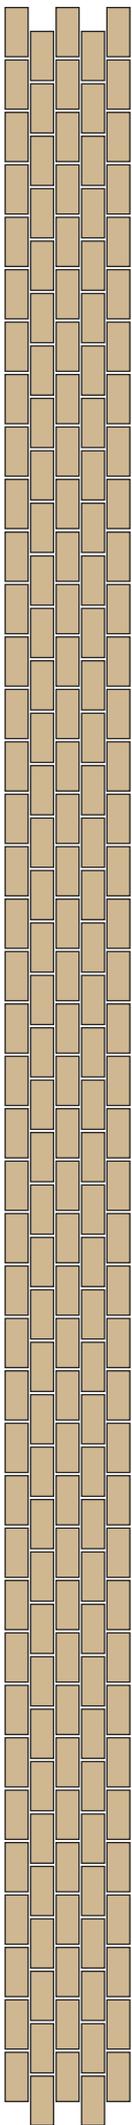

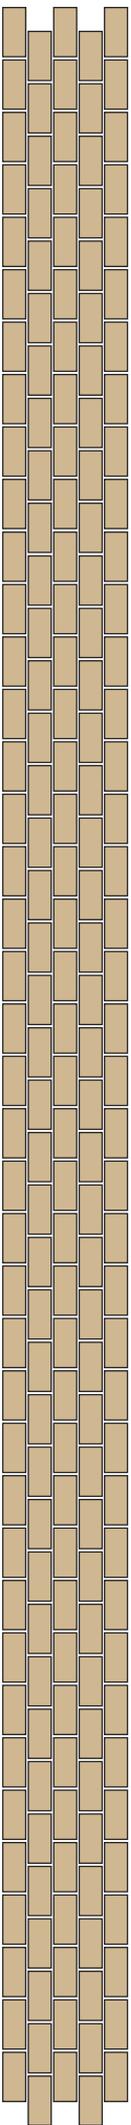

**Basic Weights –**

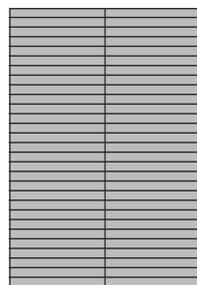

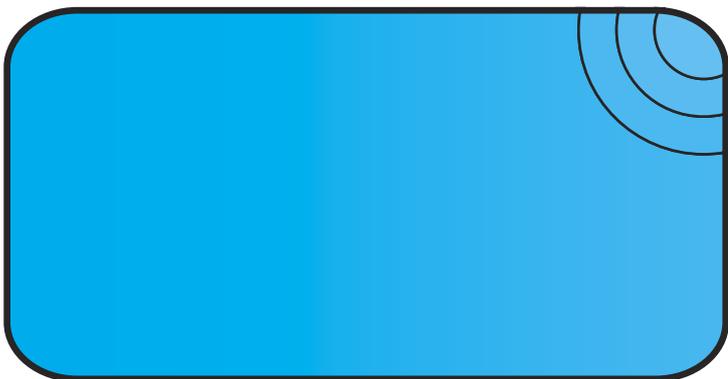

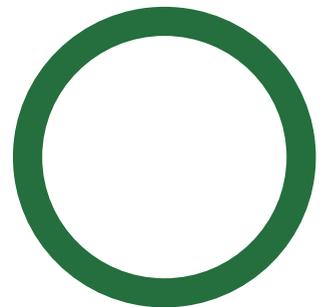

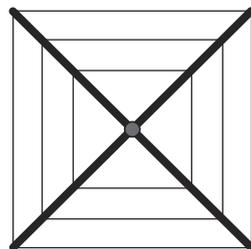

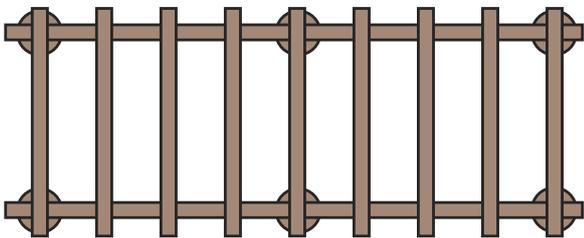

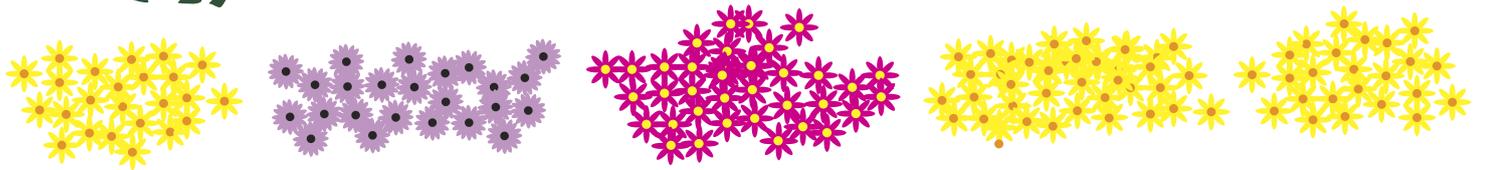

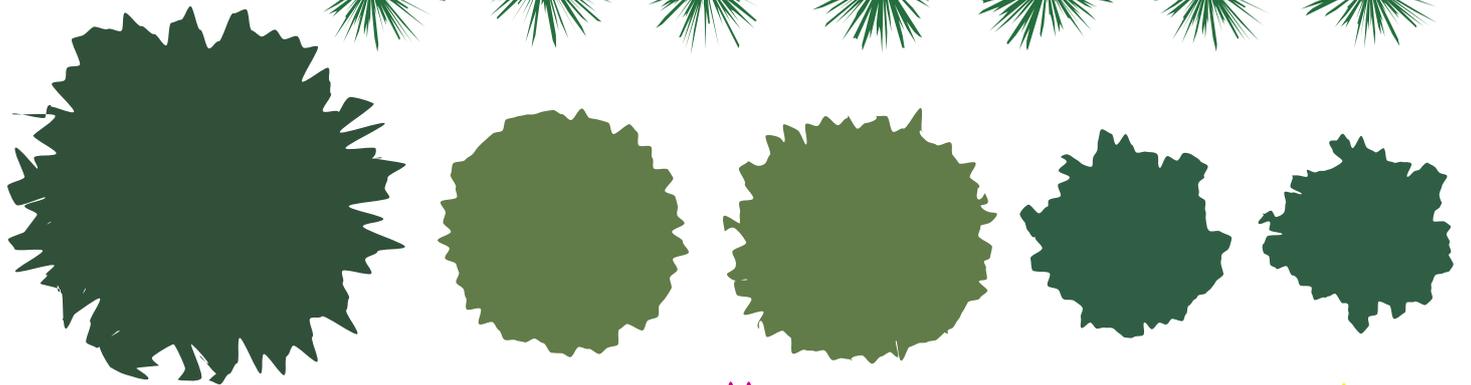

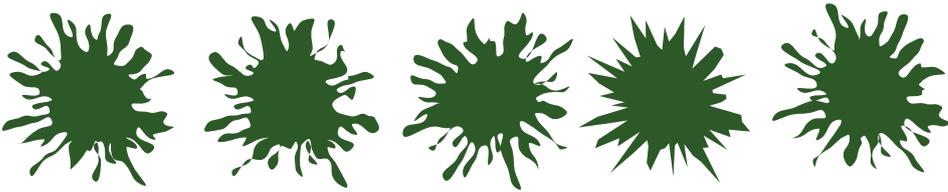

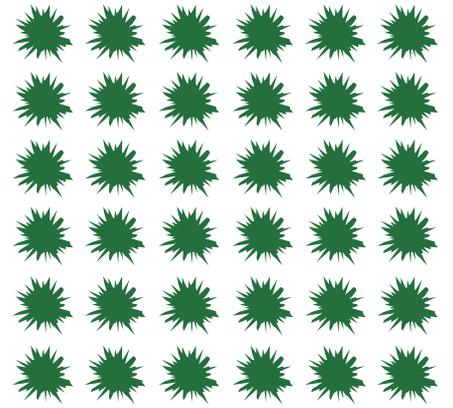

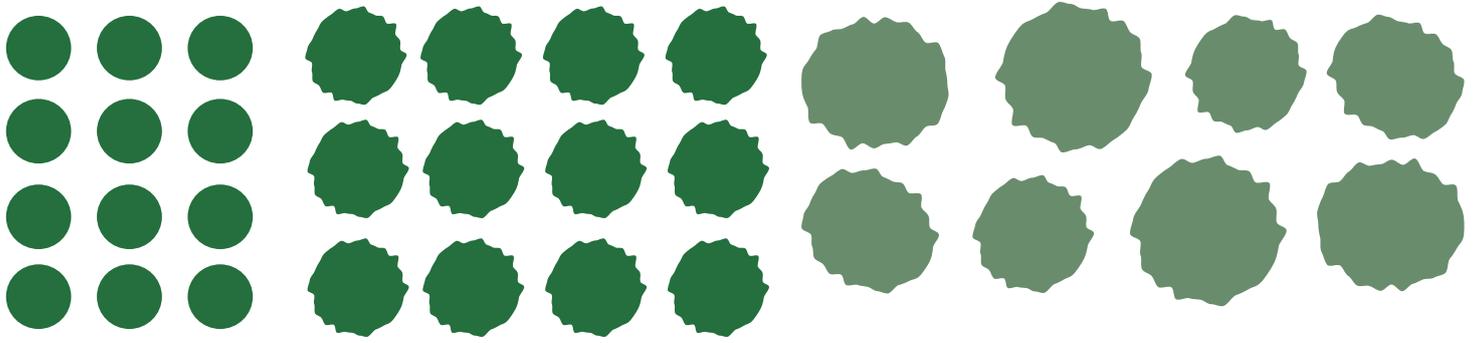

Sands and Aggregates - are sold by the tonne. These items are very dense.

Blue Metals, roadbase, and sands are the heaviest.

Material	Area Length x Width	Recommended x Depth	To Convert to Tonne	= Amount needed
Paving				
Roadbase		x 50mm	x 1.6	
Nepean River Sand		x 50mm	x 1.5	
Turf Underlay		x 50mm	x 1.5	
Premium Top Dressing		x 25mm	Sold by m <sup>3</sup>	
Mulch Average cover		x 50mm	Sold by m <sup>3</sup>	
Mulch Heavy cover		x 100mm	Sold by m <sup>3</sup>	
Decorative Pebbles		x 50mm	x 1.5	

Product	Quantity		Price
